Water quality testing lab report:

Write a paper including the following:

- An in detail description of the importance of maintiningand testing water quality
- A detailed description of your water sampling site
- Description of the tests you chose
- A comparison of the different water samples tested (did anything surprise you?)
- A plan of a waterway you WISH you could have tests; how you would test it in the field and for how long. (this portion should be at least 2 pages)

The total length of the paper should be about 4 pages.
