Sludge Test Report Format

On your folder you must state your names; hour; and the number sludge you had (include any letter that may accompany it)

For each substance you find write the following (I suggest you use a separate sheet of paper for each substance; that way you can keep it organized and I will easily be able to see what is what)

My sludge contained _____. To separate and identify this substance I did the following (please write this portion in paragraph form)

Here is the data to support that this substance is _____. (this is where all data, observations, and calculations must be; you can make a data table or a graph, whatever you need just be sure to include reference data as well just saying 'I know this is water because the boiling point was 100 degrees Celsius' is not sufficient; show me the data of how you found that BP and include the information that you know water's BP is 100 degrees Celsius.) Ensure you not only write your data down but you write something in paragraph form that describes what exactly your data proves.

By 5:00 pm on February 13, 2015 you must also e-mail me at Caitlin.anderson@detroitk12.org explaining to me how your partner did at sharing the work equally. Your subject should read the following: Your last name, first name; hour; your partner(s)'s First name and last name.
